

Pen barrel AIGC test report

Type of assay:AIGC document detection (202218020401_project_pr...)

Word count: 8,625 words

Number of paragraphs: 177 paragraphs

Number of sentences: 438 sentences

Report time: 2025-10-30 22:54:30

Report ID:AIGC74681565852571382

Detection Range:

-  ChatGPT-3.5
-  Gemini
-  A word from Wen Xin
-  Wisdom Spectrum AI
-  Deepseek
-  ChatGPT-4.0
-  Claude
-  A thousand questions about the meaning
-  Bean buns

AIGC疑似率: **9.6%**

Highly suspected AIGC to full text: 8.9%

Moderate suspected AIGC to full text ratio: 2.8%

Low suspected AIGC to full text ratio: 7.6%

Undetectable text to full text: 80.7%

You can also view the sentence-by-sentence detection results, with different colors indicating the probability that the fragment may be AI-generated

- Black: Low degree suspected AI-generated The probability of AI generation is 0%~40%, and it is judged to be human creation
- Orange: Moderate suspected AI-generated The probability of AI generation is 40%~60%, which is suspected to be AI-generated
- Red: Highly suspected AI-generated The probability of AI generation is 60%~100%, and it is judged to be AI creation
- Grey: Undetected clips Fragments that are too short clips, titles, characters, etc. are not detected

 To see the detailed recognition results of the fragment, move the mouse over the color-coded section

Chapter 1. Introduction

1.1Background of Study

With the rise of digital media, web literature has become a lifeful and significant component of the global cultural industry, attracting hundreds of millions of readers and creators [1]. However, despite this creative boom, many authors still rely on universal office software such as Microsoft Word, Google Docs for their work. While powerful, these tools were designed for general document processing and fall short of meeting the complex demands of long-form narrative works, especially web novels, which require functionalities like non-linear chapter management, visualization of character relationships, and check the coherence of the plot [2].

该段落可能为AI生成的概率为：86.6%

Creators often face too many challenges,such as including frequently switching between multiple applications to consult research data, manage ideas, and organize outlines, which significantly fragments their creative focus and reduces efficiency. Furthermore, the manuscript revision process often relies on subjective communication between authors and editors,lacking of tools for data analysis to assist in revision.The advancement of modern computational linguistics and human-computer interaction offers a potential solution to these pain points [3]. Therefore, develop a writing assistant system specifically designed for web novel author—integrating intelligent analysis and efficient collaboration—is of significant practical importance and applicational value.

该段落可能为AI生成的概率为：17.4%

1.2Project Aim

The primary aim of this project is to design and implement an integrated software called "ProsePal." This system aims to significantly enhance the creative output, quality of works, and collaborative experience of online novel authors by providing a platform that integrates creative conception, writing, analysis, and collaboration.

该段落可能为AI生成的概率为：93.6%

1.3Project Objectives

To achieve the project aim, the following types of work will be performed:

该段落可能为AI生成的概率为：28.2%

□Research and Analysis Work: To conduct a comparative analysis of existing writing tools to define functional baselines and identify key market gaps.

该段落可能为AI生成的概率为：28.2%

□System Design Work: To perform system and software architecture design, including the creation of database schemas, API specifications, and high-fidelity UI mockups.

该段落可能为AI生成的概率为：28.2%

□Implementation and Development Work: To program the front-end and back-end modules of the application, including the core text editor, document management system, and intelligent analysis etc.

该段落可能为AI生成的概率为：28.2%

□Integration Work: To integrate the core application with third-party services and libraries, specifically for NLP functionalities and real-time collaboration features.

该段落可能为AI生成的概率为：28.2%

□Testing and Quality Assurance Work: To execute a comprehensive testing strategy, including the development of unit tests, the execution of integration tests, and the coordination of user acceptance testing to ensure software stability and reliability.

该段落可能为AI生成的概率为：28.2%

1.4Project Overview

This project aims to develop an intelligent writing assistant software specifically designed for web novel creators. It combines traditional text editing function with advanced data analysis, project management, and online collaboration tools to solve the efficiency bottlenecks and the difficulties of creat that authors currently face in their workflow.

该段落可能为AI生成的概率为： 78.3%

1.4.1 Scope

The software will provide a focused, integrated environment through the following detailed functionalities:

该段落可能为AI生成的概率为： 25.2%

Intelligent Document Management:

□Real-time Cloud Synchronization: All work will be auto-saved and synced across devices.

该段落可能为AI生成的概率为： 58%

□Version History: The system will automatically save snapshots of the document, allowing users to review, compare , and restore previous versions.

该段落可能为AI生成的概率为： 58.9%

□Visual Chapter/Outline Management: A dedicated panel will allow authors to view their manuscript as a collection of "cards", which can be reordered via drag-and-drop to restructure the plot.

该段落可能为AI生成的概率为： 56.9%

Integrated Research Environment:

□Split-Screen View: An embedded browser will allow writers to conduct research within the same window as their manuscript, eliminating context-switching.

该段落可能为AI生成的概率为： 20.7%

□Research/Note Manager: A "corkboard" or notes section will allow users to clip text, images, and links from the web, and link them to specific chapters or characters.

该段落可能为AI生成的概率为： 21.7%

NLP-Powered Intelligent Analysis:

□Character Relationship Mapping: The system will automatically parse the text to identify character interactions and generate a visual graph of their relationships.

该段落可能为AI生成的概率为： 91.3%

□Sentiment Analysis: A "Story Emotion Curve" will be generated, plotting the emotional valence of the narrative chapter by chapter to help authors manage pacing.

该段落可能为AI生成的概率为： 30.4%

□Consistency Checker: Authors can create "character sheets" with key traits. The tool will flag potential contradictions found later in the text.

The probability that the paragraph may be AI-generated is: 19.2%

Seamless Collaboration:

□Role-Based Access Control: Project owners can invite collaborators as "Editors" (full edit/comment rights) or "Viewers" (read-only).

The probability that the paragraph may be AI-generated is: 60%

□Suggestion Mode: Similar to "Track Changes" in Microsoft Word, editors can make suggestions that the author can then accept or reject individually.

The probability that the paragraph may be AI-generated is: 59.8%

□Real-time Comments: A comment thread will be available for discussions, supporting mentions to notify specific collaborators.

The probability that the paragraph may be AI-generated is: 58%

1.4.2 Audience

The findings and deliverables of this project will primarily benefit the following groups:

The probability that the paragraph may be AI-generated is: 80.5%

□Web Novel Authors: As the core users, they will directly benefit from a more professional and intelligent creative environment, allowing them to focus more on the art of storytelling.

The probability that this paragraph is likely to be AI-generated is: 58.5%

□Content Editors and Planners: They can leverage the system's collaborative and analytical features to guide authors more effectively, assess manuscript quality, and gain a high-level understanding of a work's structure and potential.

The probability that the paragraph may be AI-generated is: 80.7%

1.5Proposed Structure of the Report

Figure 1-1. Project structure flowchart

Chapter 2. Background Review

1.1Fundamental Description of Software

The ProsePal is a writing assistant software. It is a category of applications designed to help users improve their writing efficiency and quality. Core functionalities typically include text editing, formatting, and spell/grammar checking. With technological advancements, modern writing tools have evolved beyond basic word processing to integrate advanced features such as project management, research organization, distraction-free writing modes, and online collaboration to meet the specific needs of various domains [4]

The probability that the paragraph may be AI-generated is: 77.7%

1.2Background Review

1.2.1Comparative Analysis of Software Features

This section provides a comparative analysis of existing writing software relevant to this project. These tools can be categorized into three types: general document tools, professional writing software, and existing web novel writing tools. The analysis will focus on their features regarding document management, collaboration capabilities, and intelligent analysis.

The probability that the paragraph may be AI-generated is: 91.3%

Table 2-1. Format of Table

Authoring Tools Document Management (Version Control, Outline) Collaboration Features Intelligent Analysis (Character Mapping, Plot Curve) Proofreading check

The probability that the paragraph may be AI-generated is: 27.2%

Scrivener[8] Yes Yes No No

Ulysses[9] Yes Yes No No

Writer's assistant Yes Yes No Yes

Orange melon writing Yes No No Yes

Our Proposed System Yes Yes Yes Yes

1.3Limitations of Existing Works

The analysis above reveals a clear market gap in existing tools:

The probability that the paragraph may be AI-generated is: 59.7%

□General Document Tools lack professional features designed for long-form writing, such as complex chapter management and character tracking, leading to a fragmented creative process.

The probability that the paragraph may be AI-generated is: 78.5%

□Professional Writing Software, while excellent for structural management, generally has weak or non-existent collaboration features, failing to meet the close communication needs between authors and editors.

The probability that the paragraph may be AI-generated is: 60%

□Existing Web Novel Tools often have basic functionalities and weak analytical capabilities, failing to fully leverage data analysis techniques to assist creative decision-making.

The probability that the paragraph may be AI-generated is: 66.6%

In summary, the current market lacks an integrated solution that seamlessly combines a fluid writing experience, deep narrative intelligence, and efficient online collaboration.

The probability that this paragraph may be AI-generated is: 93.3%

1.4Summary

This chapter introduced the fundamental concept of writing assistant software and, through comparative analysis, identified the shortcomings of existing tools in serving web novel authors. These limitations highlight the necessity of developing a more comprehensive and intelligent integrated writing platform, which is the core goal of this project.

The probability that the paragraph may be AI-generated is: 94.5%

Chapter 3. Methodology

This chapter details the methodology adopted to solve the aforementioned problems, including a clear problem statement, software development approach, technology selection, and version management plan.

The probability that the paragraph may be generated by AI is: 91.8%

1.1 Problem Statement

Web novel authors face three core problems in their creative process:

The probability that the paragraph may be AI-generated is: 59.8%

□ Inefficiency due to Tool Fragmentation: Authors must frequently switch between software for writing, research, and outlining, which disrupts their creative flow and increases cognitive load [5].

The probability that the paragraph may be AI-generated is: 89.2%

□ Lack of Macro-level Management for Complex Narratives: Long-form novels involve numerous characters and plotlines that are difficult to manage and track with traditional tools, leading to potential logical inconsistencies.

The probability that the paragraph may be AI-generated is: 91.7%

□ Subjective and Inefficient Manuscript Revision Process: Collaboration between authors and editors relies on offline, unstructured communication that lacks data support, resulting in long and inefficient revision cycles.

The probability that the paragraph may be AI-generated is: 84.4%

1.2 Approach

1.1.1 Software Development Method

This project will adopt Agile Development principles, closely following a Scrum framework. Each sprint will begin with a planning meeting to select tasks from a product backlog and will conclude with a sprint review to demonstrate a working, incremental version of the software. This iterative approach is ideal for this project as it allows for flexibility and rapid prototyping.

The probability that the paragraph may be AI-generated is: 92.9%

Figure 3-1. Image of Agile

1.1.2 Requirements Gathering

A multi-faceted approach will be used for requirements elicitation:

The probability that the paragraph is likely to be AI-generated is: 38.1%

□ Indirect Interviews: Analyzing interview records with web novel editors to extract core pain points and feature needs.

The probability that this paragraph may be AI-generated is: 38.9%

□ Competitive Analysis: Systematically analyzing existing writing software to establish functional baselines and identify opportunities for innovation.

The probability that the paragraph may be AI-generated is: 84.7%

□ User Personas: Creating typical user personas of web novel authors to ensure design decisions remain user-centric.

The probability that the paragraph may be AI-generated is: 58.7%

1.1.3 Testing and Evaluation Techniques

□ Unit Testing: Using frameworks like Jest to test individual components in isolation.

The probability that the paragraph may be AI-generated is: 81.8%

□ Integration Testing: Verifying that different modules interact correctly.

The probability that the paragraph may be AI-generated is: 70.7%

□ User Acceptance Testing: Inviting authors and editors to test the software in later stages to gather qualitative feedback for final optimization.

The probability that this paragraph may be AI-generated is: 38.9%

1.3 Technology

Table 3-1. Table of software and hardware

Category Tools Purpose

Frontend[10] Vue.js+TypeScript Building a responsive and interactive user interface.

The probability that the paragraph may be AI-generated is: 30.8%

Backend Node.js[11],Python[12] Handling business logic, API requests, and user authentication.

The probability that the paragraph may be AI-generated is: 19.2%

Database MongoDB[13],MySQL Storing document content, user data, and analysis results.

The probability that this paragraph may be AI-generated is: 32.3%

Testing Tools Jest[18],Postman[19] Unit test, API test

1.4 Project Version Management Plan

The development process will use Git for version control, with GitHub as the remote code repository. The development will be divided in to four main versions.

The probability that the paragraph may be generated by AI is: 67.9%

Table 3-2. Table of version management plan

Versions Details

Version 1 Implementation of the core writing MVP

Version 2 Integration of basic intelligent analysis features.

The probability that the paragraph may be AI-generated is: 22.1%

Version 3 Introduction of collaboration and search features.

The probability that the paragraph may be AI-generated is: 28%

Version 4 Implementation of advanced analysis features and product optimization.

The probability that the paragraph may be AI-generated is: 33.9%

The full project source code will be available at: <https://github.com/jxlin0524/Web-application-project>

The probability that the paragraph may be AI-generated is: 25.7%

1.5 Summary

This chapter has defined the core problems the project aims to solve. By combining established requirements engineering practices, a c omprehensive testing strategy, and a modern technology stack, a solid foundation has been laid for the project's successful implementa tion.

The probability that the paragraph may be AI-generated is: 95.3%
